I am a software engineer with a creative curiosity that allows me to look at problems from many, unique perspectives. I look for the “why” behind the “how” and use this information to design intuitive solutions. I am an adaptable teammate who brings passion and energy to everything I do. I’m never afraid to dive head-first into an exciting project.

[relevant experience](#)

Projects made while with General Assembly :

Feedback Loop Social Media Clone (MERN) :

Coding focused social media app with full CRUD functionality

PaperTrail API surfer (React) :

Scans the Google Civic Data API and the Open FEC API to give the user information on who funded their local, federal representatives’ campaigns

Ear Trainer (JavaScript SPA) :

Allows users to practice note recognition in a trivia game format

[skills](#)

- MERN
- JavaScript
- Bootstrap
- React
- Python
- relational & non-relational databases

[education](#)
